

Ivanka is a Md PhD, professor of neurology at the Karolinska Institute, Stockholm. She is also a world leading authority on gender neuroscience, with special regard to the pheromone sense in the field of which she has made ground-breaking discoveries, including the first demonstration of the anatomical-physiological basis of pheromone sense in the human brain.

Her on-going studies focus on the neurobiology of gender identity and how this construct might be affected by sex hormonal treatment. Another line of research deals with how every day occupational stress may jeopardize our brains. Both subjects will be addressed during the speech.
